

Managing melanoma

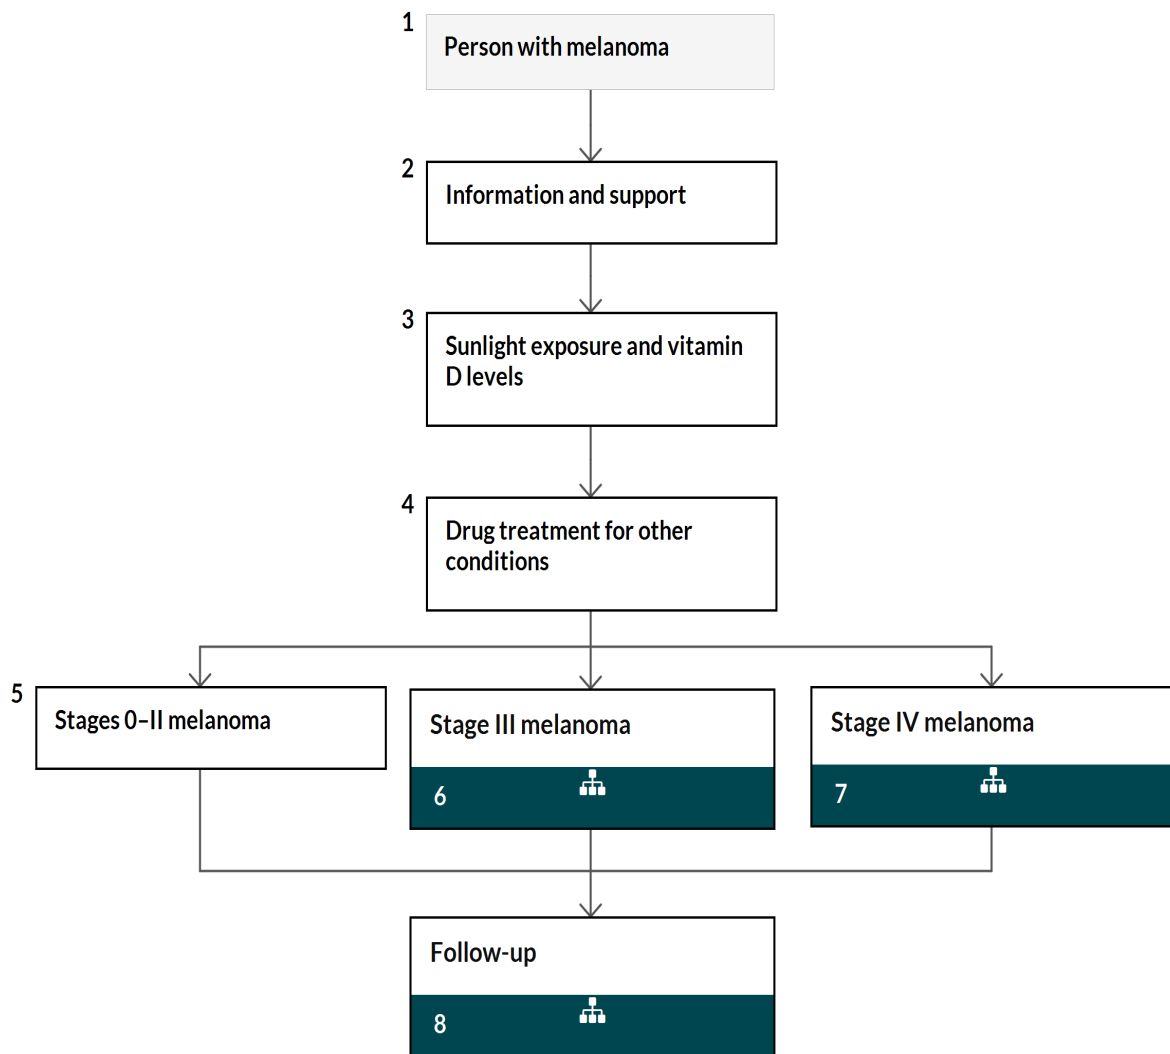

NICE Pathways bring together everything NICE says on a topic in an interactive flowchart. NICE Pathways are interactive and designed to be used online.

They are updated regularly as new NICE guidance is published. To view the latest version of this NICE Pathway see:

<http://pathways.nice.org.uk/pathways/melanoma>

NICE Pathway last updated: 13 November 2019

This document contains a single flowchart and uses numbering to link the boxes to the associated recommendations.

1 Person with melanoma

No additional information

2 Information and support

To help people make decisions about their care, follow the recommendations on communication, information provision and support in NICE's cancer service guideline on [improving outcomes for people with skin tumours including melanoma](#), in particular the following 5 recommendations:

- Improved, preferably nationally standardised, written information should be made available to all patients. Information should be appropriate to the patients' needs at that point in their diagnosis and treatment, and should be repeated over time. The information given must be specific to the histopathological type of lesion, type of treatment, local services and any choice within them, and should cover both physical and psychosocial issues.
- Those who are directly involved in treating patients should receive specific training in communication and breaking bad news.
- Patients should be invited to bring a companion with them to consultations.
- Each local hospital skin cancer multidisciplinary team and specialist skin cancer multidisciplinary team should have at least one skin cancer clinical nurse specialist who will play a leading role in supporting patients and carers. There should be equity of access to information and support regardless of where the care is delivered.
- All local hospital skin cancer multidisciplinary teams and specialist skin cancer multidisciplinary teams should have access to psychological support services for skin cancer patients.

Follow the recommendations on follow-up in NICE's cancer service guideline on [improving outcomes for people with skin tumours including melanoma](#), in particular the following 2 recommendations:

- All patients should be given written instruction on how to obtain quick and easy access back to see a member of the local hospital skin cancer multidisciplinary team/specialist skin cancer multidisciplinary team when necessary.
- All patients should be given both oral and written information about the different types of skin cancer and instruction about self-surveillance.

Carry out a holistic needs assessment to identify the psychosocial needs of people with melanoma and their needs for support and education about the likelihood of recurrence, metastatic spread, new primary lesions and the risk of melanoma in their family members.

Follow NICE's recommendations on communication and patient-centred care in [patient experience in adult NHS services](#).

3 Sunlight exposure and vitamin D levels

Give people with melanoma and their families or carers advice about protecting against skin damage caused by exposure to the sun while avoiding vitamin D depletion. For more information see NICE's recommendations on [sunlight exposure: risks and benefits](#).

Measure vitamin D levels at diagnosis in secondary care in all people with melanoma. (For help with [implementation: getting started](#) see the NICE guideline on melanoma.)

Give people whose vitamin D levels are thought to be suboptimal advice on vitamin D supplementation and monitoring in line with local policies and the NICE's recommendations on [vitamin D: increasing supplement use among at-risk groups](#). (For help with [implementation: getting started](#) see the NICE guideline on melanoma.)

4 Drug treatment for other conditions

Do not withhold or change drug treatment for other conditions, except immunosuppressants, on the basis of a diagnosis of melanoma.

Consider minimising or avoiding immunosuppressants for people with melanoma.

5 Stages 0–II melanoma

Excision

Consider a clinical margin of at least 0.5 cm when excising stage 0 melanoma.

If excision for stage 0 melanoma does not achieve an adequate histological margin, discuss further management with the multidisciplinary team.

Offer excision with a clinical margin of at least 1 cm to people with stage I melanoma.

Offer excision with a clinical margin of at least 2 cm to people with stage II melanoma.

Imiquimod for stage 0 melanoma

Consider topical imiquimod¹ to treat stage 0 melanoma in adults if surgery to remove the entire lesion with a 0.5 cm clinical margin would lead to unacceptable disfigurement or morbidity.

Consider a repeat skin biopsy for histopathological assessment after treatment with topical imiquimod for stage 0 melanoma, to check whether it has been effective.

See what NICE says on [preoperative tests](#).

6 Stage III melanoma

[See Melanoma / Treating stage III melanoma](#)

7 Stage IV melanoma

[See Melanoma / Treating stage IV melanoma](#)

8 Follow-up

[See melanoma/melanoma overview /Follow-up](#)

¹ At the time of publication (July 2015) topical imiquimod did not have a UK marketing authorisation for this indication. The prescriber should follow relevant professional guidance, taking full responsibility for the decision. Informed consent should be obtained and documented. See the General Medical Council's [Prescribing guidance: prescribing unlicensed medicines](#) for further information.

Your responsibility

Guidelines

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals and practitioners are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or the people using their service. It is not mandatory to apply the recommendations, and the guideline does not override the responsibility to make decisions appropriate to the circumstances of the individual, in consultation with them and their families and carers or guardian.

Local commissioners and providers of healthcare have a responsibility to enable the guideline to be applied when individual professionals and people using services wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with complying with those duties.

Commissioners and providers have a responsibility to promote an environmentally sustainable health and care system and should assess and reduce the environmental impact of implementing NICE recommendations wherever possible.

Technology appraisals

The recommendations in this interactive flowchart represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, health professionals are expected to take these recommendations fully into account, alongside the

individual needs, preferences and values of their patients. The application of the recommendations in this interactive flowchart is at the discretion of health professionals and their individual patients and do not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Commissioners and/or providers have a responsibility to provide the funding required to enable the recommendations to be applied when individual health professionals and their patients wish to use it, in accordance with the NHS Constitution. They should do so in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities.

Commissioners and providers have a responsibility to promote an environmentally sustainable health and care system and should assess and reduce the environmental impact of implementing NICE recommendations wherever possible.

Medical technologies guidance, diagnostics guidance and interventional procedures guidance

The recommendations in this interactive flowchart represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, healthcare professionals are expected to take these recommendations fully into account. However, the interactive flowchart does not override the individual responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or guardian or carer.

Commissioners and/or providers have a responsibility to implement the recommendations, in their local context, in light of their duties to have due regard to the need to eliminate unlawful discrimination, advance equality of opportunity, and foster good relations. Nothing in this interactive flowchart should be interpreted in a way that would be inconsistent with compliance with those duties.

Commissioners and providers have a responsibility to promote an environmentally sustainable health and care system and should assess and reduce the environmental impact of implementing NICE recommendations wherever possible.
